

Supplementary Figure 1. Exploratory dosage endpoints: Forest plots comparing LCPT vs IR-Tac (A) and vs PR-Tac (B) (mITT)

ANOVA model including treatment and country as fixed effects. Difference in LS means calculated by ([LCPT] – [IR-Tac or PR-Tac]).

ANOVA, analysis of variance; LCPT, LCP tacrolimus; IR-Tac, immediate release tacrolimus; PR-Tac, prolonged release tacrolimus; LS, least squares; mITT, modified intent-to-treat; TL, trough level; TDD, total daily dose.
