A Corrigendum on

Five-Year Outcome After Continuous Flow LVAD With Full-Magnetic (HeartMate 3) Versus Hybrid Levitation System (HeartWare): A Propensity-Score Matched Study From an All-Comers Multicentre Registry

by Francica A, Loforte A, Attisani M, Maiani M, Iacovoni A, Nisi T, Comisso M, Terzi A, De Bonis M, Vendramin I, Boffini M, Musumeci F, Luciani GB, Rinaldi M, Pacini D and Onorati F (2023). *Transpl Int.* 36:11675. doi: 10.3389/ti.2023.11675

In the original article, there was a mistake in the **Graphical Abstract** as published. The propensity-score matching survival was incorrectly given as “64.1% vs. 81.3% (p .02)”. The correct values are “64.1% for HM3 vs. 41.7% in HVAD (p 0.02)”. The Kaplan-Meier curve is correct, it was just a transcription error.

The corrected **Graphical Abstract** appears below.

The same mistake was present in the text body. A correction has been made to the **Abstract** and to the **Results** section:

Abstract: “The propensity-score matching analysis (130 pairs of HVAD vs. HM3) confirmed a significantly lower 5 years survival (41.7% vs. 64.1%; p 0.02). . .”

Results, Propensity Matched Population: “HVAD patients confirmed a significantly lower 5 years survival (64.1% vs. 41.7%; p 0.02) (Figure 2B). . .”

The authors apologize for these errors and state that this does not change the scientific conclusions of the article in any way. The original article has been updated.
